

SWIMMING LIGHTS CABLE ROLLING INSTRUCTIONS

If you expect a long lasting operational life of your swimming lights cable, then please follow these 3 easy steps on how to roll it out and in. Following these exact steps without missing any of them, guarantees a long life that can last up to several years of operation. This lights cable was manufactured in a way that allows relatively easy repair procedures, in case of damage. Please contact info@pacer2swim.com in case of any need for assistance with your swimming lights cable.

ROLL-IN STEP #1:

grab roller with right hand on lever, while holding it with foot and with cable heading to pool

ROLL-IN STEP #1:

grab roller with right hand on lever, while holding it with foot and with cable heading to pool

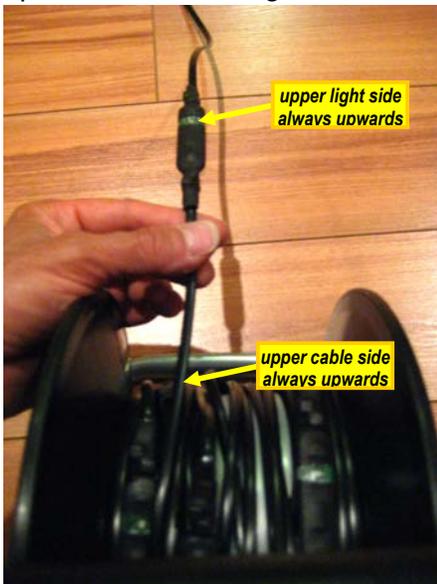

ROLL-IN STEP #2:

roll in up to grey console cable and leave the end staying accessible for pool-less operation

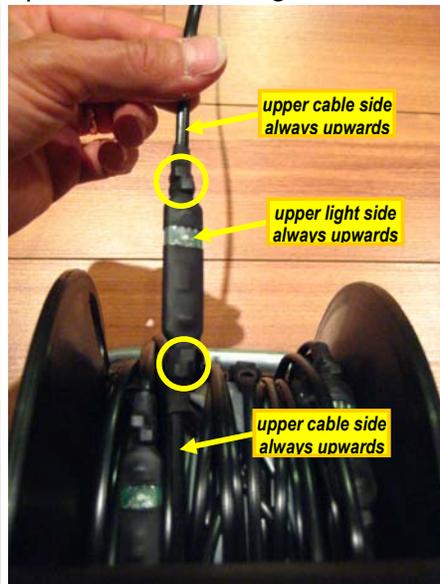

ROLL-IN STEP #3:

the wet left-hand fingers always keep the upper side of the cable upwards while rolling-in

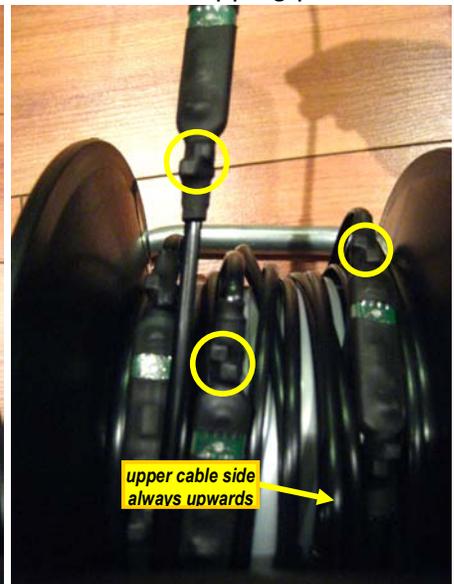

ROLL-IN STEP #3:

the wet left-hand fingers always keep the upper side of the cable upwards while rolling-in

ROLL-IN STEP #3:

Always try to distribute the cable evenly onto the roller by finding free non-overlapping places

The most important care must be directed towards rolling the cable onto the roller. The final result should look more or less like these illustrations below, where the cable is homogeneously rolled-in, always with its upper side facing upwards/outwards. This avoids the cable from twisting onto itself and, thus, from prematurely breaking wires from the inside. Unrolling your swimming lights cable works very easily, again in 3 steps: holding the roller, one swimmer pulling the cable out of the roller with help of the holder's right hand on the lever, placing the weights wherever needed.

Extra hints to further prolong the life and warranty of your swimming lights cable:

- The roller should be placed in a way that minimized water spillage over/onto it
- Near the water, the roller must always be correctly oriented and with the buzzer downwards
- Never pull the cable with too much strenght, as the cable/lights may get damaged
- Never try to pull the cable out of the roller without manual help over the roller lever
- Although the lights are very robust, try not stepping on them too hard, to avoid damage
- Never leave the lights lane under direct sunshine, unless under warter inside the pool
- Always avoid the cable from getting knots or any other kind of uneven/unlinear looks
- Never attempt to cut or puncture the cable or the lights, as it may cause severe damage
- Any visible mishandling affects/shortens/voids warranty for this swimming lights cable
